SUMMARY

Data Scientist with 2+ years of experience in predictive modeling and customer analytics. Skilled in Python, SQL, and machine learning model development for large-scale datasets, experience in deploying churn prediction models and converting raw data into actionable insights.

SKILLS

Programming: Python, SQL

Machine Learning: Scikit-Learn, TensorFlow, PySpark

Data Analysis: Pandas, NumPy, Matplotlib, Seaborn

NLP & Generative AI: Text Embeddings, Transformers, LLMs, Prompt Engineering, LangChain, RAG

Tools: Excel, Git, Docker, Jenkins, Tableau, Power BI, Microsoft Fabric

EXPERIENCE

Junior Data Scientist — VOZIQ AI

Jul 2024 – Present | Hyderabad

Intern: Jul 2024 – Feb 2025 | Full-time: Feb 2025 – Present

- Built and deployed customer churn prediction models improving model accuracy by 20% and reducing customer churn by 12%.
- Processed and integrated large-scale customer datasets to build standardized customer profiles for modelling.
- Evaluated model performance using ROC-AUC, precision-recall, and lift metrics.
- Developed risk-based customer segmentation models enabling targeted retention campaigns.
- Designed customer health indicators translating model outputs into actionable business insights.
- Collaborated with data engineering teams to validate ETL pipelines and monitor data quality.

Trainee Data Scientist — TuringMinds.AI

Jun 2022 – May 2023 | Hyderabad

- Performed exploratory data analysis and feature engineering on large datasets.
- Built machine learning models for classification, regression, and clustering tasks.
- Developed Tableau dashboards to visualize insights for stakeholders.
- Applied the full data science lifecycle from data preparation to model evaluation.

PROJECTS

LLM-Powered RAG Document Search System

- Built AI search system using Google Gemini and Chroma DB vector database.
- Implemented vector embeddings and similarity search pipeline for contextual document retrieval.
- Developed Streamlit interface for interactive AI-powered document querying
- Added dynamic user API configuration allowing the application to be customized for multiple users and accounts

Customer Churn Prediction System

- Built end-to-end machine learning pipeline integrating multiple customer datasets.
- Performed feature engineering and predictive modelling for churn prediction.
- Evaluated retention strategies using gains charts and survival analysis.

EDUCATION

Post Graduate Program – Computational Data Science

Hyderabad | 2022 – 2023

International School of Engineering (INSOFE)

Bachelor of Technology – Electronics and Communication Engineering

Hyderabad | 2018 – 2022

TKR College of Engineering and Technology

CERTIFICATION

Advanced ML and Generative AI certification – Innomatics Research Labs

Hyderabad | 2023 – 2024
